

Bobcat

Bobcats are fierce cats that live in swamps, mountains, prairies, and deserts in much of North America.

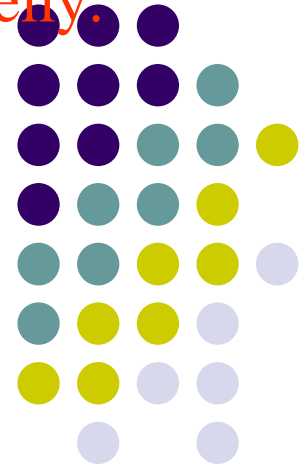

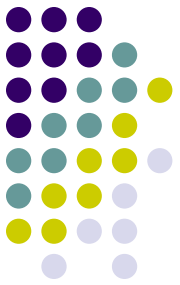

Total length is: 33-40in

Tail length: 4-6 in

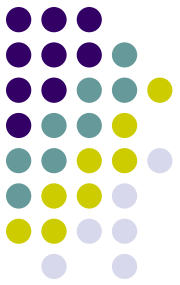

Weight: 8-22lbs.

They have long legs, toes with retractile claws,
dark spotted reddish-brown fur on top and gray fur
with black spots on their belly.

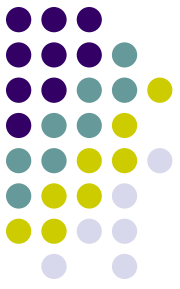

- **Bobcats prefer rabbits and hares. They also feed on mice, rats, birds, occasionally on fawns, and injured adult deer.**

Females usually bear a single litter of 2-8 kittens in the summer. Bobcats have a life span of 10-14 years.

Who are your animal's enemies? How does your animal defend itself?

- Bobcats are preyed by coyotes, cougars, wolves, owls, and people. It defends itself by using its teeth and claws.
